

Understanding Our Use of Cookies

A cookie is a small data file that requests permission to be stored on your computer's hard drive. Upon your consent, the file is installed, allowing the cookie to assist in analyzing web traffic or notifying you when you access a specific site. Cookies enable web applications to interact with you on a personal level. By collecting and retaining information about your preferences, the web application can customize its functions to better suit your needs and interests.

We utilize traffic log cookies to determine which pages are frequently accessed. This information aids us in analyzing webpage traffic and enhancing our website to better meet customer requirements. The data collected is solely used for statistical analysis and is subsequently removed from our system.

In summary, cookies enhance your experience on our website by allowing us to track which pages you find beneficial and which ones you do not. Importantly, a cookie does not provide us with access to your computer or any personal information, aside from the data you voluntarily share with us.

You have the option to accept or reject cookies. While most web browsers are set to automatically accept cookies, you can typically adjust your browser settings to decline them if you wish. However, this may limit your ability to fully utilize the website.
